</tr>
</tbody>
</table>
1.3. Warranty Information

Caution #1

Do not ship the system back before you receive the necessary transport and shipping information.

1.4. Disclaimer

DECTRIS has carefully compiled the contents of this manual according to the current state of knowledge. Damage and warranty claims arising from missing or incorrect data are excluded.

DECTRIS bears no responsibility or liability for damage of any kind, also for indirect or consequential damage resulting from the use of this system.

DECTRIS is the sole owner of all user rights related to the contents of the manual (in particular information, images or materials), unless otherwise indicated. Without the written permission of DECTRIS it is prohibited to integrate the protected contents in this publication into other programs or other websites or to use them by any other means.

DECTRIS reserves the right, at its own discretion and without liability or prior notice, to modify and/or discontinue this publication in whole or in part at any time, and is not obliged to update the contents of the manual.
2. USE OF THE EIGER X 16M

The EIGER X 16M detector system has been designed for the detection of X-rays produced by synchrotrons or laboratory sources. It is intended for indoor use only. For other applications, please contact DECTRIS technical support for additional information.

<table>
<thead>
<tr>
<th>Caution #2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Improper use of the DECTRIS detector system can compromise its safety and its functionality is no longer guaranteed.</td>
</tr>
</tbody>
</table>

<table>

<tr>
<td>Do not use the detector in vacuum.</td>
</tr>
</tbody>
</table>

2.1. Product Return and Recycling

We recycle DECTRIS detector systems that are no longer suitable for use. If you are not using your DECTRIS detector system any more, send it back to us. We will make sure that your system is responsibly and safely recycled. This is free for customers who purchased a new DECTRIS detector system.

</table>

### 3.2.3. Thermal Stabilization Unit

**Information #5**

Please consult the user documentation of the SMC HRS-012A thermal stabilization unit for details.

**Caution #4**

The maximum allowable coolant pressure is 3 bar.

#### Table 3.7: Thermal Stabilization Unit Ratings

<table>
<thead>
<tr>
<th>Value</th>
<th>Value</th>
</tr>
</thead>
</table>
| Thermal stabilization unit power input                               | **115 V version**  
Single phase 100 VAC 50/60 Hz, 115 VAC 60 Hz, allowable voltage range ±10%, 7.5 A (50 Hz) to 8.3 A (60 Hz)  
**230 V version**  
Single phase 200 VAC to 230 VAC 50/60 Hz, allowable voltage range ±10%, 4.6 A (50 Hz) to 5.1 A (60 Hz) |
| Dimensions (W x H x D)                                               | 377 mm x 615 mm x 500 mm                                                                                       |
| Weight                                                               | **115 V version**: 40.0 kg  
**230 V version**: 43.0 kg                                                                                       |
| Typical flow                                                        | 3 L min⁻¹                                                                                                      |
| Maximum operation pressure                                          | 3 bar                                                                                                          |
3.3. Ambient Conditions

Caution #5

The EIGER X16M detector is equipped with a temperature and a humidity sensor. When either sensor detects that the operating conditions are not met, the detector will shut off. However, as the sensors may not prevent damage, temperature and humidity should be monitored to avoid breaching the operation limits.

Information #6

The relative humidity within the module chamber must be lower than 30% during operation and lower than 25% during startup (use of dry air or nitrogen advised).

The EIGER X16M detector is designed for indoor use only. The ambient conditions shown in table 3.8 must be satisfied. The stated values are for the ambient conditions. Values inside the detector, in particular due to the dry-air or nitrogen supply, are different. These are described in section 5.4 and chapter 6.

Table 3.8: Detector Operating Ambient Conditions

<table>
<thead>
<tr>
<th>Ambient Condition</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating temperature</td>
<td>+20°C to +35°C</td>
</tr>
<tr>
<td>Operating humidity</td>
<td>&lt;80% at 20°C, non-condensing</td>
</tr>
<tr>
<td>Storage temperature</td>
<td>+15°C to +40°C</td>
</tr>
<tr>
<td>Storage humidity</td>
<td>&lt;40% at 20°C, non-condensing</td>
</tr>
</tbody>
</table>

Caution #6

Please consider following points when storing the detector

- Make sure the temperature and the humidity inside the transport box does not exceed the specified range (use of a drying agent is required).
- Ensure that no condensation moisture develops if the detector is stored at low temperature.
4. DETECTOR DIMENSIONS AND CONNECTORS

4.1. EIGER X 16M Detector

4.1.1. Technical Drawing

3D step files of the EIGER X 16M detector are available on request. Please contact DECTRIS technical support for more information.

Figure 4.1: Drawing of the EIGER X 16M Detector (also printed separately in the user documentation folder)
### 4.1.2. Front Side of the Detector

<table>
<thead>
<tr>
<th>Warning #3</th>
<th><img src="image1.png" alt="Image" /></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Danger</strong></td>
<td></td>
</tr>
</tbody>
</table>
Danger of electric shock. Do not touch the Mylar® foil. The sensors behind the Mylar® foil are operated at high voltages. Touching the Mylar® foil can cause an electrical shock.

<table>
<thead>
<tr>
<th>Caution #7</th>
<th><img src="image2.png" alt="Image" /></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Caution</strong></td>
<td></td>
</tr>
</tbody>
</table>
The cover may not protect the detector from a direct beam.

---

**Figure 4.2:** The EIGER X 16M Detector with the Cover in Place (front view)

The detector comes with a protective cover (1.5 mm, Aluminium) for the front window, which should only be removed during operation. The sensors are behind a 12 µm thick Mylar® (PET) foil coated with aluminum to protect them from humidity, dust and from being touched.
**Figure 4.3:** The EIGER X 16M Detector with the Cover Removed (front view)

4.1.3. Back Side of the Detector

**Figure 4.4:** The EIGER X 16M Detector (back view)
### 4.1.4. Status LEDs

**Table 4.1:** The Meaning of the Status LEDs on the Detector Back Plane

<table>
<thead>
<tr>
<th>LED</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LINK</td>
<td>Glowing green if detector and DCU are powered and connected via the RJ45 data cable.</td>
</tr>
<tr>
<td>ACT</td>
<td>Flashing green if there is activity on the data line between detector and DCU.</td>
</tr>
<tr>
<td>EN</td>
<td>Orange/Yellow to indicate the detector is in counting mode, but is otherwise switched off.</td>
</tr>
<tr>
<td>TEMP</td>
<td>Red at power-on, when the detector is not initialized, or if the detector temperature or humidity is out of the limits. Turns green on detector initialization if temperature and humidity are within the allowed limits.</td>
</tr>
<tr>
<td>POWER</td>
<td>Green when the power supply is functioning. Red is an indication of power failure or if the detector temperature or humidity is out of the operating limits.</td>
</tr>
</tbody>
</table>

### 4.1.5. Connectors and Connecting Cables/Pipes

**Table 4.2:** Electric Connectors and Connecting Cables

<table>
<thead>
<tr>
<th>Connector</th>
<th>Description</th>
</tr>
</thead>
</table>
| DATA      | 4 x RJ45 Ethernet connector  
DATA 1 -> detector control unit port 1  
DATA 5 -> detector control unit port 2  
DATA 9 -> detector control unit port 3  
DATA 13 -> detector control unit port 4  
Use Cat 6A S/FTP Ethernet cable(s). |
| POWER     | AC power connector (see table 3.5)                                       |
| EXT IN    | External trigger input (see table 3.5)  
Use a Lemo® Type 00 (NIM/CAMAC) cable. |
| EN OUT    | Output signal 5V (max. current 100mA) (see table 3.5)  
High when counting is enabled.  
Use a Lemo® Type 00 (NIM/CAMAC) cable. |

**Caution #9**

Use only the included thermal stabilization unit.

---

4.2. Detector Control Unit

4.2.1. Configuration

**Caution #10**

Do not access or modify the operating system of the detector control unit.

The user interface of the detector control unit is accessible using a web browser. The detector control unit does not need any connections other than the power and Ethernet cables.

The detector control unit has to be connected point-to-point to the detector via 4 x 10GBase-T Ethernet. The detector control unit can be integrated into the site network infrastructure using one of the interfaces described in table 4.5. The detector control unit is optimised for performance and
stability of operation. In order to achieve these goals we deliver the detector control unit with fixed firmware (bios etc.) and software (OS) version. The detector control unit must not be operated in an environment where unauthorized access is possible. The detector control unit does not provide authentication mechanisms and is not protected against malicious acts by unauthorized third parties.

Using the web front end, it is possible to restart the EIGER control service, trigger an update, and to shut down and to reboot the detector control unit. Any further control of the detector is carried out via the SIMPLON API (see separate documentation).

See DELL owner’s manual for further details.
4.3. Thermal Stabilization Unit

A thermal stabilization unit is required for the operation of the EIGER X 16M detector system. The hoses and the detector are equipped with self-sealing valves to avoid dripping when connecting or disconnecting the tubes. There is no fixed limitation on the length of the tubing, but it should be kept as short as possible to ensure the best flow.

Table 4.6: Operating Conditions

<table>
<thead>
<tr>
<th>Condition</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating temperature</td>
<td>The thermal stabilization unit has to be set to a temperature of 23°C for normal operation.</td>
</tr>
<tr>
<td>Maximum operating pressure</td>
<td>3 bar</td>
</tr>
<tr>
<td>Coolant</td>
<td>66% distilled water and 34% ethylene glycol.</td>
</tr>
</tbody>
</table>

**Danger #2**

Ethylene glycol can be seriously harmful to your health or fatal if handled incorrectly. Consider the packaging and safety instructions provided by your local supplier.

**Information #10**

Before operating the thermal stabilization unit, please read the User Manual of the thermal stabilization unit.

**Caution #12**

When connecting or disconnecting the cooling hoses, turn off the detector and the thermal stabilization unit.

**Caution #13**

When operating the detector, the thermal stabilization unit must always be turned on and the pump has to be activated (see user documentation of thermal stabilization unit).

**Caution #14**

Use opaque hoses to avoid the growth of algae.

**Caution #15**

Do not set the temperature of the thermal stabilization unit below the recommended operating temperature. Condensing moisture can develop and damage the detector.
5. INSTALLING THE DETECTOR SYSTEM

5.1. Transport Considerations

Warning #4

Avoid vibration and shock when moving the detector.

Caution #16

Use the included lifting eye for transporting the detector where applicable.

The detector has been delivered in a robust transport box. Please keep this transport box for transport or storage purpose.

5.2. Mounting

Caution #17

Do not place the detector near heat sources or in a place subject to direct sunlight, excessive dust or mechanical shock.

Make sure that the detector has adequate ventilation.

- Do not cover any air intakes or outlets.
- Place the detector in a location with adequate air circulation.
- Make sure the detector has enough space for proper ventilation (minimum wall distance: 170 mm).
- Do not operate the detector in a closed environment.

The detector can be mounted in the ways which are described below.
5.2.1. Mounting from Above

Use the mounting brackets as depicted in figure 5.1. These mounting brackets have to be mounted on the base plate of the detector. The detector should be mounted using all four outer 7 mm holes (indicated with yellow circles).

---

**Caution #18**

Make sure the mounting brackets are mounted and properly tightened using the screws provided. The placement of the screws is indicated with yellow diamonds in figure 5.1.

---

**Figure 5.1:** Drawing of the EIGER X 16M Detector Base Plate with Mounting Brackets (bottom view)
5.2.2. Mounting from Below

**Warning #5**

It is strictly forbidden to add any threads to the detector base plate or to the detector housing.

The detector should be mounted using the four internal M6x1 threads as shown in figure 5.2 (indicated with yellow circles).

**Figure 5.2:** Drawing of the EIGER X 16M Detector Base Plate (also printed separately in the user documentation folder)

**Caution #19**

The four M6 screws must not intrude into the detector more than 16 mm.
5.3. Grounding of the Detector

Caution #20

The main plug of the detector control unit and the power supply of the detector have to be connected to a grounded power outlet.

Although the detector might be already grounded via the mounting bolts, the detector should be grounded additionally via the functional ground connector at the back in order to establish a defined grounding.

5.4. Connection to Dry Air or Nitrogen

Warning #6

When venting with nitrogen, take proper precaution against the risk of asphyxiation caused by oxygen displacement from nitrogen. Ensure sufficient ventilation and oxygen level monitoring. Use compressed air for venting large vessels or in confined spaces.

Caution #21

Humidity might damage the detector. Make sure that the detector is operated within the allowed ambient conditions (see section 3.3).

The EIGER X 16M detector has to be connected to a dry air (or nitrogen) source to avoid humidity and condensation damage when it is outside of the storage box. For information on system connections, refer to the section 4.1.5 and for storage of the detector system refer to the section 7.4.

Information #11

Oil free, dry air of <20% relative humidity or nitrogen must be used.

- The recommended flow is 5 l/h⁻¹ to 10 l/h⁻¹ (at 2 bar).
- For reliable operation we recommend dry air of <5% relative humidity.
- The gas pressure must not exceed 2 bar.
- The minimum gas pressure is 1 bar.
- The humidity control shuts down the power of the detector modules when the humidity is too high (see chapter 6).

5.5. Mounting the Detector Control Unit

Caution #22

Make sure that the detector control unit has adequate ventilation.

The detector control unit can be mounted in a standard 19 inch rack, which has to be properly grounded.
6. TEMPERATURE AND HUMIDITY CONTROL

The EIGER X 16M detector has a combined temperature and humidity sensor. The temperature and humidity control shuts down the detector when the humidity or the temperature of the sensor exceeds the following limits:

<table>
<thead>
<tr>
<th>Shutdown Temperature</th>
<th>Shutdown Humidity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lower Limit</td>
<td>Upper Limit</td>
</tr>
<tr>
<td>15°C</td>
<td>35°C</td>
</tr>
</tbody>
</table>

The communication with the detector control unit will remain active after a temperature shut down (only power of the modules shuts down).

Warning #7

The temperature and humidity control cannot prevent condensation issues and resulting damage to the sensor due to improper use. Always make sure that the detector is warmed up (thermal stabilization unit temperature set to 23°C) prior to pumping down, venting, and opening the chamber. Only use dry air or nitrogen for venting.

Information #12

The detector has an internal thermal protection switch. If the thermal protection switch is activated, it turns the detector off to prevent damage. In this case all LEDs will be off and no communication is possible any more with the detector. The detector will automatically power on again, as soon it is cooled down to appropriate working conditions.

Information #13

If the humidity is outside the specified range, the software will prevent operation and a respective error message will be raised by the API. The user can check the temperature and humidity via the API, as long as the temperature is not out of range. If the temperature breaches safe conditions the thermal protection switch will be triggered and the detector will completely switch off.

To start the detector correctly, please refer to section 7.1 and execute the correct startup procedure.

Make sure that the cooling unit is running at the recommended temperature (according to section 4.3) and that Nitrogen or dry air flow is turned on at the recommended flow rate, given in section 5.4. Then restart the software.

Information #14

A free-flowing air stream is mandatory in order to properly cool the electronics inside the detector. Do not cover any ventilation holes.
7. **OPERATION PROCEDURE**

Before operating the detector, make sure you have read the Technical Specifications and the User Manual.

### 7.1. Getting Started

Before switching on:

- Mount the detector properly.
- Connect the detector to ground potential, using the functional ground connector.
- Connect the detector to power supply; make sure the detector power switch is OFF.
- Connect the detector to a nitrogen or dry air source, capable of supplying at least the minimum recommended flow rate.
- Connect the coolant hoses. Make sure they are properly mounted on both sides.
- Set the temperature to 23°C on the thermal stabilization unit and turn it on. If the detector was not at room temperature, wait until the thermal stabilization unit has reached stable operation.
- Connect the power cable, the local network cable, and the detector data cable to the detector control unit. (If more than one Ethernet cable is required, please pay attention to the numbering of the cables as described in table 4.2)

### 7.2. Startup Procedure

Please use the following startup procedure:

- Turn on the dry air or nitrogen at least 30 min before turning on the detector. Then turn ON the power switch at the back of the detector.
- Turn on the detector control unit. Wait at least 5 min before trying to connect.

The detector should now be ready to use.

<td>The software start-up procedure is described in detail in the User Manual.</td>
<td></td>
</tr>
</tbody>
</table>

### 7.3. Turning Off the Detector

To turn off the detector:

- Turn OFF the detector power switch.
- Turn OFF the detector control unit.
- Do not remove the nitrogen/dry air connection. It is a requirement that it is left at the recommended flow rate according to section 5.4.
7.4. Storing the Detector

Even if the detector is not in operation, it is recommended that the dry air or nitrogen flow is maintained to reduce the risk of humidity damage to the detector.

Please follow these instructions:

- Put the detector in a plastic bag, add at least 200 g of drying agent (i.e. silica gel) into the bag and seal it air-tight.
- Check the humidity and change the drying agent frequently for compliance with the storage requirements in section 3.3.

7.5. Cleaning and Maintenance

The Mylar® foil must not be touched or cleaned. If it becomes dirty or is damaged, please contact DECTRIS technical support.

The housing can be cleaned with a soft tissue.

The EIGER X 16M detector does not require any maintenance.

Please refer to the user documentation of the thermal stabilization unit for detailed information about the maintenance of your thermal stabilization unit.
# 8. TROUBLESHOOTING

Table 8.1 provides an overview of possible problems with the detector system and instructions in order to solve the problems. If the problem you are experiencing is not listed below or if the instructions do not help, please contact support@dectris.com.

## Table 8.1: Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Detector control unit does not start properly.</td>
<td>Detector control unit is not powered.</td>
<td>Check the User Documentation of the detector control unit (see section 3.1.3).</td>
</tr>
<tr>
<td>Communication error, the detector is not found at startup.</td>
<td>Data cable is not connected or defective.</td>
<td>Check the connection between detector control unit and detector. Make sure that there is a direct, peer-to-peer connection between the detector control unit and the detector. Avoid tangling or strong bending of the Ethernet data cable. Check the status of the LINK LED. If the detector control unit and the detector are powered and correctly connected, the LINK LED should be green (Takes up to 30s after power up).</td>
</tr>
<tr>
<td>The detector fails to turn on.</td>
<td>The power cord is not connected or the plug is incompletely inserted.</td>
<td>Connect the power cord firmly. Check the green LED on the external power supply.</td>
</tr>
<tr>
<td>The fuse is blown.</td>
<td></td>
<td>Replace the fuse, see section 4.1.5.</td>
</tr>
<tr>
<td>The temperature is over the critical limit. The thermal protection was triggered.</td>
<td></td>
<td>Check the thermal stabilization unit. The detector will power on again, as soon as the temperature is within the allowed operating conditions.</td>
</tr>
<tr>
<td>Image acquisition not possible.</td>
<td>Detector is not properly initialized.</td>
<td>Check the status of the POWER LED. If it is red and the TEMP LED is green, there is a problem with the electronics – contact <a href="mailto:support@dectris.com">support@dectris.com</a>.</td>
</tr>
<tr>
<td>Detector housing is humid.</td>
<td>Ambient humidity around the detector exceeds the operating conditions.</td>
<td>Shut down the detector immediately and check the humidity. Power up the detector only when the ambient humidity has been reduced.</td>
</tr>
</tbody>
</table>
